

Go-Live Update: October 3rd , 2022

Documenting Medication Administration & follow up

1. *The paper cMAR remains the source of truth for documentation of medication administration in alignment with regulatory college and Island Health standards (see Resources and Standards).*
2. *Documentation of medication related assessments, nursing diagnosis and interventions are captured in the electronic health record (EHR), in the appropriate location (see below table)*

Type of Documentation	EHR Location	What to document
PRN medication assessments and interventions (pre and post med admin)	IVIEW: focused systems assessment	Assessment, interventions and re-assessment of affected system(s) post med administration e.g. vital signs, pain, nausea, agitation
Adverse drug reaction (ADR)	IVIEW: focused systems assessment	Assessment of affected system(s) and interventions Note: Serious ADR requires reporting as outlined in Serious Drug Reaction and Medical Device Incident Reporting Policy 9.3.8 P and Procedure 9.3.9
Provider notification	IVIEW provider notification section	Details of communication with ordering provider e.g. “nausea assessment completed and no anti-emetic ordered”
Context or additional information not captured in IVIEW fields	IVIEW chart annotation	Narrative documentation when required e.g. Title: Pain medication found in client bed Annotation content: Client continues to report pain and on further assessment pill found in bed... <i>(additional assessments and interventions included in annotation)</i> See Narrative Nursing Documentation in the EHR Guideline 9.1.45G
