

Go-Live Update: IView Customization and Quick Tips

Conditionality in Interactive View:

The diamond with downward pointing arrow, indicates there are additional conditional responses available.

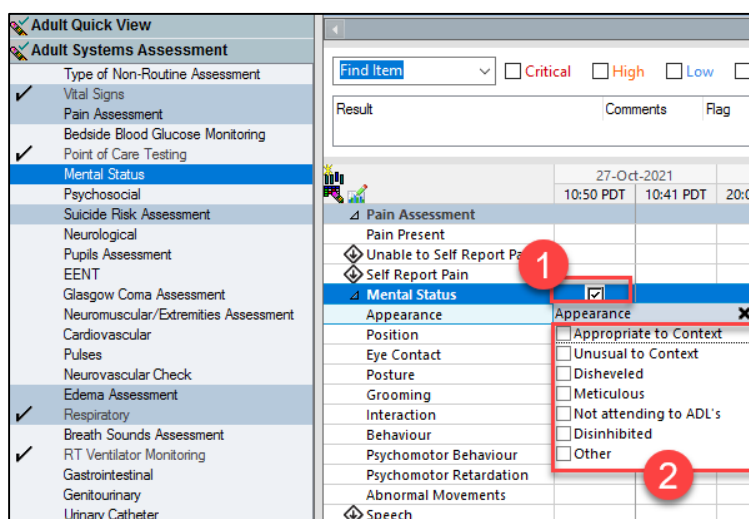

After selecting a response within a field (eg. Humidification), additional fields will appear that are determined by your original response. (eg. Humidity Type).

Documenting Efficiently in Interactive View:

1. Double-click on the blue bar in the desired column under the time.
 - The section will be pre-selected.
2. Select your response.
 - Use the arrows keys to move through documentation responses.
 - Use the space bar to select a response.
 - Press tab to move to the next response

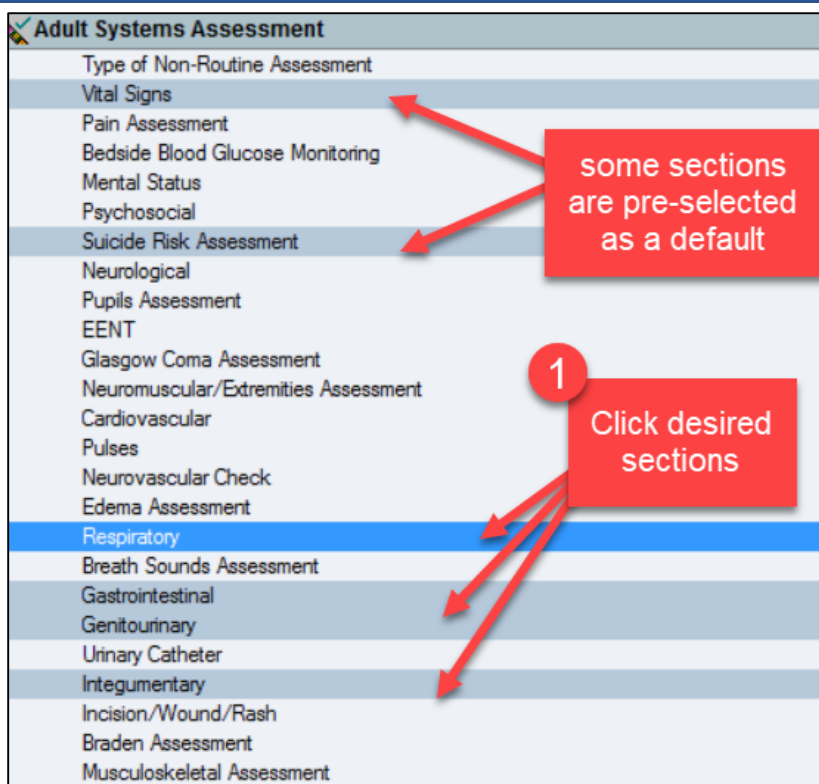

Pre-Select Sections for Documentation in IView

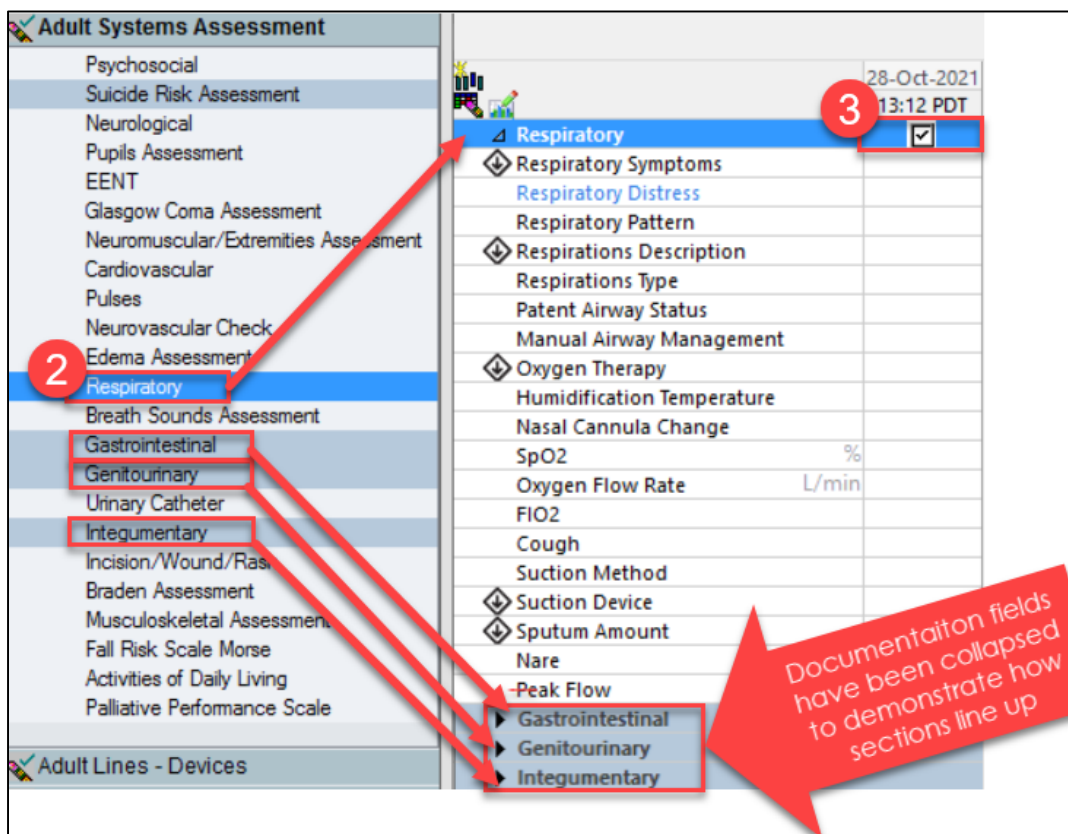

To document a specific assessment, you can pre-select sections within a band. Set this up when you first document your assessments for use throughout your shift. If you document in additional sections after your initial selection, they will be added on view.

1. Select all the sections you want to document for your assessment (e.g. respiratory, gastrointestinal, genitourinary, integumentary).
 - Be careful not to select sections that you do not want to include as part of your assessment, you cannot 'un-select'.

Go-Live Update: I View Customization and Quick Tips

- Click on first section again (e.g. Respiratory).
 - This will line up your documentation and display in the selected order at the top of the time column.
- Complete and sign documentation.

Collapse sections in Interactive View:

To display only those sections you are documenting on currently, you can collapse/close other sections to reduce what appears on display.

1. Click the triangle for a section to collapse it.
2. Example of collapsed sections.

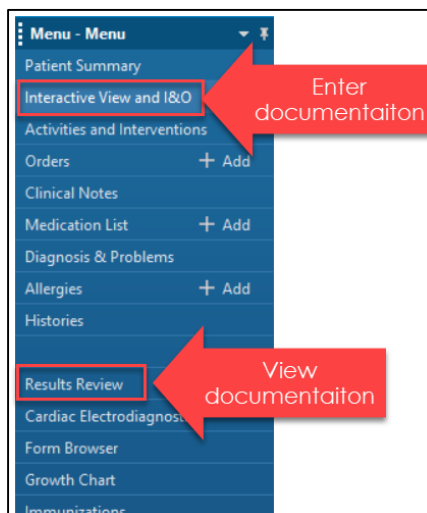

Viewing Assessments in Interactive View:

When documenting in IView, the bands and sections that appear are specific to your clinical role and area.

- IView is for entering documentation.
- Results Review is for viewing documentation.

You can view all IView documentation for that encounter (regardless of clinical area) in **Results Review** and the **Clinical Information** tab.

Saving Customizations:

If you have made customizations to Interactive View (such as time intervals or font size) you must exit PowerChart through the toolbar in order to save these customizations so they apply when you open another chart.

- Ensure you have only one chart open when you make the customizations.
- Exit from the toolbar (not the top right corner).
