

Applies to:	Providers who are searching for Long Term Care (LTC) resident documentation in the Emergency department and Acute Care settings. Applies to residents who have come from a facility where the Providers and/or Nursing staff are documenting electronically.
Purpose:	Results Review does not display note titles, including ED Transfer Note title, making it difficult to find important LTC Provider documentation. It is difficult to find pertinent LTC documentation in Results Review, such as the Problem List. Use the preferred workflow below to locate LTC Provider and Nursing documentation within Provider View.

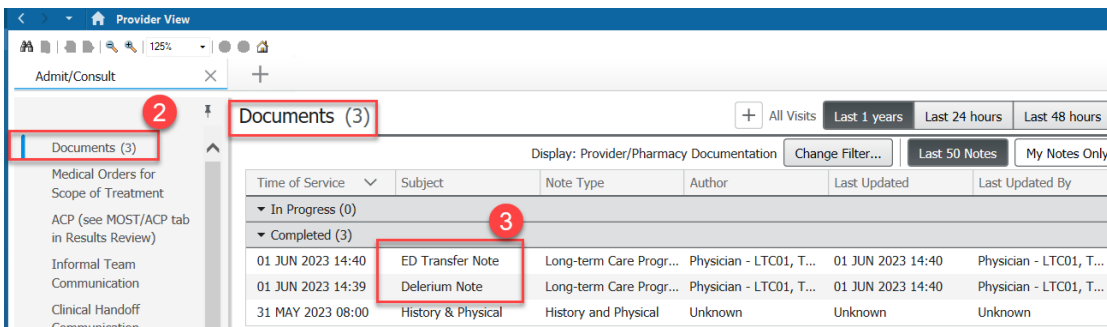

LTC Providers Documentation

LTC Providers documenting within the Electronic Health Record (EHR) note any events leading up to ED and Acute Care admission which filter into the **Documents** component of **Provider View**.

1. Navigate to **Provider View**

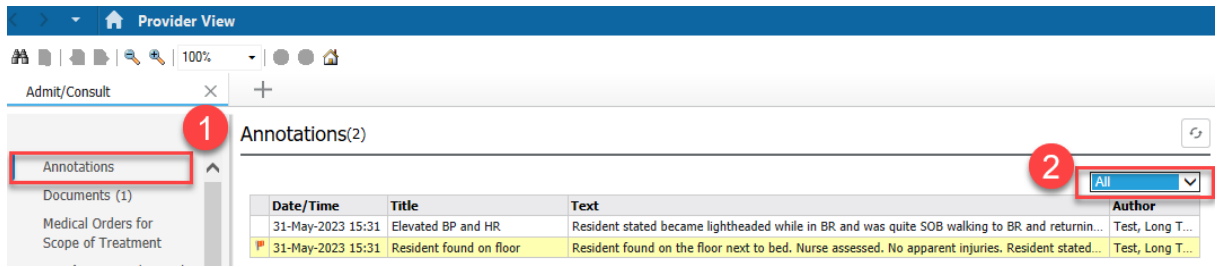

2. Click on **Documents** component
3. Navigate to important notes by viewing the note titles which will appear under the Subject

Nursing Documentation

Nursing documentation can be located in the **Annotations** component in **Provider View**.

1. Navigate to the **Annotations** component in **Provider View**
2. Set the filter to **All Visits** to view annotations across all encounters

Note: Other pertinent Resident information can be found in **Provider View**, such as:

1. The **Medical Orders for Scope of Treatment (MOST)** and **Advance Care Plan (ACP)** components.
2. The **Problem List** component for a list of acute and chronic issues.
3. The **Vital Signs** component for baseline vitals.
