

PLAY (PLYIH) Domain

Usernames and Passwords – Providers

The PLAY (PLYIH) Domain of the Electronic Health Record (EHR) is a “copy” of Island Health’s new EHR, including all of the **IHealth functionality** (e.g., electronic documentation and Computerized Provider Order Entry [CPOE]). By accessing the PLAY (PLYIH) Domain, you will see how the EHR works and get the hands-on experience you need to prepare yourself, or refine your skills.

To ensure that you are seeing the view and functions of the EHR that are appropriate to your role, you will need to use my experience to select the position which closest matches your role. Each username below has a prepopulated NRGH location patient list containing play patients for your use. These play patients have some data to view and have play access to pharmanet to view medication information for Best Possible Medication History (BPMH). Displayed below are the physician usernames in PLYIH will provide access to all fully active EHR positions. Instructions and loggins listed below.

Note: These usernames reflect Activated functionality, there is a different list of [Usernames and Passwords for users practicing at a Regional Non-Fully Activated site](#).
