

Top changes for pharmacy staff when Computerized Provider Order Entry (CPOE) is live at their site*:

- Review and verify medication orders electronically in Cerner Medication Manager as part of closed loop medication management.
- Access Medication Requests submitted electronically to Pharmacy from Nursing. (tbd)
- Areas that would have scanned/faxed orders to pharmacy will now have orders entered via CPOE.
- Use dynamic eMAR functionality for real-time modifications and up-to-date administration data.
- Outpatient prescription medications ordered in the EHR will be automatically pulled into the best possible medication history (BPMH) at their next visit.

**More comprehensive workflow changes, based on specific roles and/or specialties, will be covered in engagement and training activities.*
